

Under Eye Brightening Corrector

Backlighting for your concealer

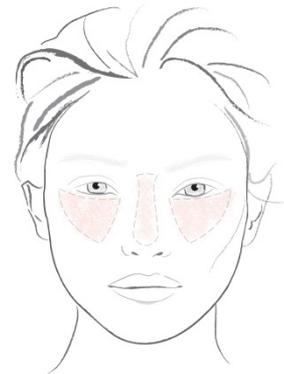

- **Inverted Triangle** – trace a “v” underneath the eyes, then use the Under Eye Brightening Corrector and blend inside the lines. This eradicates darkness and reflects light upwards to reduce the look of puffiness.
- **360° Eye Approach** – apply the Under Eye Brightening Corrector under the brow, over the brow and around the orbital bone. This technique is perfect to address concerns about “raccoon” eyes.
- **Afternoon Boost!** – Layer Under Eye Brightening Corrector over existing makeup under the eyes and down the bridge of the nose. Use this technique to instantly awaken the eye area and brighten your look.
